Celebration Series
Projection Light
Instructions
LL01-HC

ONLY USE SUPPLIED TRANSFORMER
IMPORTANT SAFEGUARDS

To reduce the risk of fire, electric shock, or injury when using any electric appliance, precautions should be made. These precautions include but are not limited to:

Read all instructions.
CAUTION! — Use only as directed.

This product has a polarized plug to reduce the risk of electric shock. It will therefore only fit into a polarized outlet one way. If the plug does not fit, reverse the plug. If it still does not fit, contact a qualified electrician. Do not use with an extension cord unless the plug can be fully inserted. Do not alter the plug.

DO NOT attempt to open the protective housing or operate the device if the aperture windows are damaged. If the unit requires service that involves removing the protective housing, contact the manufacturer. Opening the protective housing voids the warranty.

Use only three-wire outdoor extension cords that have three-prong grounding plugs, plugged into grounded outlets. Acceptable extension cord types:

SW, SW-A, SOW, SOW-A, STW, STW-A, STOW, STOW-A, SJW, SJW-A, SJOW, SJOW-A, SJTW, SJTW-A, SJTOW, SJTOW-A

Ground Fault Circuit Interrupter (GFCI) protection is to be provided on the circuit(s) or outlet(s) to be used while operating portable projection light in a wet location. Receptacles with built-in GFCI protection are available for this purpose.

SAVE THESE INSTRUCTIONS

Before You Begin

Carefully unpack package contents to make sure all parts are present. Some assembly is required. Note: One slide comes preloaded for your convenience.

Assembly

1. To attach ground stake, remove the screw from the stake.
2. Use the screw to attach the stake to the pivot mount (see fig. 1).
3. Plug the 2-prong adapter into the outlet on the power supply transformer. Screw on the weather-resistant cap tightly to help protect the connection from weather.
Installing Slides
Note: Be careful to avoid touching the slide images.
Remove the two screws, lid, gasket, and slide (see fig. 2). Choose a different slide and insert it into the projection light housing. If the slide does not fall easily into light housing, remove the slide and turn it around. **DO NOT FORCE SLIDE INTO HOUSING.** Replace gasket, lid, and screws.

Placing the Projection Light
- The projection light can be staked into the ground. With the stake removed, it can also be mounted to a structure using a sturdy hanging clamp and safety cable.
- Place light approximately 10 to 15 feet from the projection surface (see fig. 3). After the light is turned on you may need to adjust the distance to get the best results.
  **Note: If you insert a different slide, you may need to adjust distance for clarity.**
- Position the angle of projection by loosening and tightening the angle adjustment screws (see fig. 4).
- The projection light must be positioned so that the fan vent is on the bottom (see fig. 4). Also, be sure that the fan vent is not in danger of being blocked. If the air vent is blocked, the unit and slide are in danger of being damaged.
- Only use supplied transformer connected to a properly grounded outdoor outlet.
- Do not use with dimmers.

Setting the Projection Speed & Timer
- The power button on the back of the unit (see fig. 4) also controls the speed of the motion projection. Use the power button to toggle between slow, medium, fast, fixed, and off.
- The projection light runs on an automatic 6-hour on, 18-hour off cycle. To set the timer, turn the projection light on at the time you wish for the light to begin its 6-hour on cycle. Turning the light off manually will interrupt the timer cycle and the timer will reset to the time at which it is next turned on.
Notes:
- Only use supplied transformer connected to a properly grounded outdoor outlet.
- Do not use with dimmers.
- When hanging the light, for safety purposes it is recommended to mount using a sturdy hanging clamp and safety cable.
- The light is weather resistant, but do not leave the laser or power supply transformer in standing water. If using with an extension cord outdoors where the power supply transformer may be exposed to weather, plug into a GFCI outlet only.
- Heavy snow can block the light. If heavy snow is expected, mount the light in such a way that it will not be covered by snowfall.
